Mohammed Fareed Mandeeya Haruna — Portfolio Content

Full-stack developer · Tamale, Ghana. Copy this section by section into your site. Items in [brackets] are things only you can fill in (live links, screenshots, numbers).

1. Hero

Headline: Full-stack developer building payment-ready web products for the Ghanaian market.

Sub-line: I design, build and ship production apps end to end: Next.js, React, TypeScript, Node.js, MongoDB and PostgreSQL, with Paystack, WhatsApp/SMS and AI built in.

Buttons: View projects · Download resume · Contact me

2. About

I'm Mohammed Fareed, a fourth-year BSc Computer Science student at the University of Technology and Applied Sciences (UTAS), Navrongo, graduating in 2027. I'm a full-stack web developer at ELAGENT, a freelance developer, and a software developer and form teacher at Hanara Schools, so I build software and I also stand in front of a classroom.

My work centres on real-world systems for Ghana: e-commerce, Mobile Money and Real-world payments, school management, and tools for local food vendors. I'm comfortable across the whole stack, from UI design and prototyping to backend architecture, third-party integrations and deployment, and I've shipped both solo and in teams.

I work spec-first: I write the plan, data model and requirements before code, then build and ship against them.

Quick facts

- Based in Tamale, Ghana (open to remote work)
- Level 400 Computer Science, UTAS Navrongo, 2024–2027
- Currently: Full Stack Web Developer at ELAGENT (contract, remote, United States)
- Also: Student Intern at Tamale Metropolitan Assembly; Form Teacher & Software Developer at Hanara Schools
- Founder of Klyro

3. Skills

Languages: JavaScript, TypeScript, HTML, CSS

Frontend: React, Next.js, Vite, Tailwind CSS, shadcn/ui, Bootstrap, UI design, PWA, accessibility (WCAG AA)

Backend: Node.js, Express, REST APIs, JWT authentication, Zod/Joi validation, role-based access control, Socket.io (real-time)

Databases and ORMs: MongoDB, Mongoose, PostgreSQL, Prisma, Neon, Docker, Redis, Kubernetes, Caching IndexedDB/Dexie (offline-first)

Payments and integrations: Paystack (payments, subaccounts, split payments to Mobile Money), Clerk (auth and subscriptions), Cloudinary (media), Nodemailer and Resend (email), Arkesel (SMS), WhatsApp ordering

AI features: Real Ai assistants using API keys from Nvidia, Google and OpenAI, customer-facing AI chatbots, admin AI assistants, AI shopping assistants, voice and messaging order flows

Deployment and tooling: Vercel, Netlify, Railway, Git/GitHub, Command Line (Bash), Google Stitch, Banani, Google Antigravity, Picsart

Beyond code: team leadership, project planning and specs, UI prototyping, teaching Mathematics, Science and Computing

4. Experience

Full Stack Web Developer — ELAGENT

Sep 2026 – Present · Contract · Remote (United States)

- Work across frontend and backend on software projects in a remote engineering team.
- [Add 1–2 specifics: features shipped, stack used, what you owned.]

Student Intern — Tamale Metropolitan Assembly

Aug 2026 – Present · On-site, Tamale

- Support IT management and computer information systems activities.
- [Add: systems you worked with, tasks, or improvements you made.]

Team Leader, Machine Learning Group — UTAS

2026

- Led a team applying machine learning models to a chronic kidney disease dataset.
- Coordinated model testing and evaluated prediction accuracy.
- [Add: models used, accuracy achieved, team size.]

Solo Full-Stack Developer — Freelance

2025 – Present

- Designed, built and deployed full-stack web apps end to end for clients and personal ventures.
- Owned the full lifecycle: specs, Stitch/Banani UI prototyping, implementation and deployment.
- Delivered e-commerce, school, vendor-tooling and content platforms (see Projects).

Form Teacher & Software Developer — Hanara Schools

Sep 2024 – Present · Full-time · Tamale · Hybrid

- Architected and built an end-to-end School Management System across two campuses, supporting 790+ active students, multi-stream classes, fee reconciliation and academic reporting.
- Engineered IndexedDB/Dexie local caching and background sync with UUID idempotency keys so staff can record fees and attendance during network outages.
- Built a digital fee ledger with dual verification between Form Teachers and School Accountants, including discrepancy logs, audit trails and digital handover receipts.

Teaching experience

- Taught Basic 2, Basic 5, Basic 6, JHS 1 and JHS 3 in Mathematics, Science and Computing.
- This classroom time directly shapes how I design software for real, non-technical users.

5. Projects

For each project on the site, use the same card layout: **screenshot · one-line pitch · role · stack · key features · links (live / GitHub / case study)**.

Klyro — Project Operating System for Teams & Organizations

Founder · AI integration, Next.js, TypeScript, Tailwind CSS, MongoDB, Cloudinary, Socket.io

- A project operating system that connects projects, tasks, roadmaps, collaboration, development workflows and delivery in one place.
- Full-stack build with authentication, integrations and scalable collaboration workflows.
- Planned spec-first, with product docs split into focused markdown files.
- Mako Ai, your personal assistant that runs the whole system for you, have a problem? Just ask Mako
- [screenshots]

Kaypacks — Water Delivery E-Commerce Platform

kaypacks.vercel.app · Next.js, TypeScript, MongoDB, Cloudinary, Paystack, Tailwind CSS, Vercel

- Full e-commerce platform for a water delivery business, with multiple brands and pack quantities.
- Admin panel for products, orders and business settings.
- One-click GPS location capture at checkout that auto-fills delivery details.
- Direct WhatsApp ordering plus Paystack payments.
- Yango door delivery and self-pickup options.
- Customer-facing AI chatbot that recommends products, answers questions, places orders and escalates to human agents.
- Separate admin AI assistant for order summaries, inventory checks, store settings and sales analytics.

AfriCart — Multi-Vendor Marketplace PWA

africart-one.vercel.app · Next.js, [MongoDB or PostgreSQL/Prisma: confirm], JWT, Cloudinary, Paystack

- Role-based dashboards for Admins, Vendors and Shoppers.
- Real-time cart discount and wholesale pricing engine.
- Admin tools for vendor verification, subscription tiers, hub-based fulfilment oversight and financial/inventory dashboards.
- Secure vendor onboarding with document-review workflows and multi-role JWT auth.
- Paystack subaccount/split payments for direct vendor payouts to Mobile Money.
- WCAG AA-compliant, dark-first responsive UI with custom skeleton loading states.

HANARA SMS — School Management System

React, Vite, Tailwind CSS, Node.js, Express, MongoDB, JWT, Zod, Socket.io

- 36+ Mongoose models, secure REST APIs and polymorphic RBAC across 6 roles: Superadmin, Admin, Teacher, Accountant, Parent, Driver.
- Daily fee-collection ledger for feeding and bus fares with real-time tracking, discrepancy resolution and an immutable audit log.
- Attendance tracking and GPS-based teacher check-in/check-out.
- BECE-compliant grading engine with GES-standardised curriculum across 13 academic levels.
- Parent portal for results, attendance and fee history.
- Compliance with the Ghana Data Protection Act (Act 843): guardian-consent workflows and third-party API health monitoring.
- Offline-first record keeping with background sync (IndexedDB/Dexie).

Slay by Humu — Luxury E-Commerce Storefront

slaybyhumu.vercel.app · React, Node.js, MongoDB, Tailwind CSS, Paystack

- Luxury storefront with an AI shopping assistant built into the experience for product guidance.
- Paystack payments, real-time order tracking and in-app notifications.
- Full admin panel: products and inventory, orders, customers and sales analytics.

Threadly — Clothing E-Commerce Site (missing from your resume)

Next.js, TypeScript, MongoDB/Mongoose, Tailwind CSS, shadcn/ui, Paystack, Cloudinary, Vercel

- Built with a two-person team, where you led the development.
- Clothing storefront with Paystack checkout and Cloudinary-hosted product media.
- [Add: features, live link, screenshots.]

AI Order Assistant — Multi-Tenant SaaS for Food Vendors (missing from your resume)

- Multi-tenant SaaS for Ghanaian food vendors that takes orders across WhatsApp, SMS and voice, with POS support.
- [Add: stack, how tenants are isolated, status, live link.]

NovelVerse — Reading and Writing Platform

- Wattpad-style platform for reading and writing stories, with user roles, a coin-based economy and Clerk-powered subscriptions.
- [Add: stack, status, live link.]

Optional: BuildTogether (startup concept)

- A platform where people post projects and recruit collaborators by role, with verified contribution records once a project is completed.
- Include it under a "Ideas I'm exploring" section only if you want to show product thinking.

6. Education and leadership

BSc Computer Science (Level 400), 2024 – 2027 (expected) — University of Technology and Applied Sciences (UTAS), Navrongo.

Leadership: Team Leader, Machine Learning Group (2026). Founder of Klyro.

7. Contact

- GitHub: github.com/hmfareed
- LinkedIn: linkedin.com/in/mohammed-fareed-haruna
- Location: Tamale, Ghana
- Phone: 0209878744 — consider leaving this off a public site and using a contact form instead, to avoid spam and scraping.

Availability line: Open to freelance projects and remote roles. Tell me about your project.

Suggested structure

1. Home (hero, 3 featured projects, skills strip)
2. About (story, teaching background, quick facts)
3. Projects (filter by e-commerce / SaaS / education / AI)
4. Experience (timeline)
5. Skills
6. Resume (download button)
7. Contact (form, email, GitHub, LinkedIn)

Optional: a short blog or "how I built it" case studies for Kaypacks, AfriCart and HANARA SMS, since those show the most depth.
