MOHAMMED FAREED MANDEEYA HARUNA

Tamale, Ghana · 0209878744 · mohammedfareed.dev@gmail.com
github.com/hmfareed · linkedin.com/in/mohammed-fareed-haruna

Fourth-year Computer Science student and full-stack developer specializing in the MERN stack, with hands-on experience building and shipping production web apps solo and in teams. Focused on real-world payment (Paystack) and e-commerce systems for the Ghanaian market, comfortable across the stack from UI design to backend architecture and third-party integrations.

EDUCATION

BSc Computer Science, Level 400 *2024 – 2027 (Expected)*
University of Technology and Applied Sciences (UTAS), Navrongo

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, HTML, CSS
- **Frontend:** React, Next.js, Vite, Tailwind CSS, shadcn/ui, Bootstrap, UI Design
- **Backend:** Node.js, Express, JWT Authentication, Zod/Joi Validation
- **Database:** MongoDB, Mongoose, PostgreSQL
- **Tools & Integrations:** Paystack, Clerk, Socket.io, Vercel, Cloudinary, Nodemailer, Google Stitch, Banani, Git/GitHub, Command Line/Terminal (Bash)

EXPERIENCE

Full Stack Web Developer — elAgent *Sep 2026 – Present*
Contract · United States · Remote

- Working as a full-stack web developer on software projects, contributing across frontend and backend development in a remote engineering environment.

Student Intern — Tamale Metropolitan Assembly *Aug 2026 – Present*
Internship · Tamale, Northern Region, Ghana · On-site

- Supporting IT management and computer information systems activities as part of a hands-on internship within the Tamale Metropolitan Assembly.

Team Leader, Machine Learning Group — UTAS *2026*

- Led a team applying machine learning models to a chronic kidney disease dataset, evaluating prediction accuracy and coordinating model testing.

Solo Full-Stack Developer — Freelance *2025 – Present*

- Independently designed, built, and deployed full-stack web applications end-to-end for clients and personal ventures, from architecture to deployment.
- Managed complete project lifecycles solo, including specs, Stitch/Banani-based UI prototyping, implementation, and Vercel deployment.

Form Teacher & Software Developer — Hanara Schools *Sep 2024 – Present*
Full-time · Tamale, Northern Region, Ghana · Hybrid

- Architected and built an end-to-end School Management System across two campuses, supporting 790+ active students, multi-stream classes, fee reconciliation, and academic reporting.
- Engineered IndexedDB/Dexie local caching and background sync with UUID idempotency keys so staff can record fees and attendance during network interruptions.
- Built a digital fee ledger with dual verification between Form Teachers and School Accountants, including discrepancy logs, audit trails, and digital handover receipts.

PROJECTS

Klyro — Project Operating System for Software Teams
Founder · Next.js, TypeScript, Tailwind CSS, PostgreSQL

- Building Klyro, a project operating system for software teams connecting projects, tasks, roadmaps, collaboration, development workflows, and delivery.
- Designing and implementing the full-stack product with Next.js, TypeScript, Tailwind CSS, PostgreSQL, authentication, integrations, and scalable collaboration workflows.

Kaypacks — Water Delivery E-Commerce Platform
kaypacks.com (currently on Vercel) · Next.js, TypeScript, MongoDB, Cloudinary, Paystack, Tailwind CSS

- Built a full-stack e-commerce platform for a water delivery business, with an admin panel for managing products, orders, and business settings.
- Implemented one-click GPS location capture at checkout, auto-filling delivery details, alongside direct WhatsApp ordering and Paystack payments.
- Integrated Yango door delivery and self-pickup fulfillment options.
- Built a customer-facing AI chatbot that recommends products, answers questions, places orders, and escalates to human agents.
- Developed a separate admin AI assistant for order summaries, inventory checks, store settings, and sales analytics.

AfriCart — Multi-Vendor E-Commerce Marketplace PWA
africart-one.vercel.app · Next.js, MongoDB, JWT, Cloudinary, Paystack

- Engineered a multi-vendor marketplace with role-based dashboards for Admins, Vendors, and Shoppers, plus a real-time cart discount and wholesale pricing engine.
- Built an admin panel for vendor verification, subscription-tier management, hub-based fulfillment oversight, and financial/inventory dashboards.
- Implemented secure vendor onboarding with document-review workflows and JWT-based multi-role authentication.
- Integrated Paystack subaccount/split payments enabling direct vendor payouts to Mobile Money accounts.
- Built a WCAG AA-compliant, dark-first responsive UI with custom skeleton loading states.

HANARA SMS — School Management System
React, Vite, Tailwind CSS, Node.js, Express, MongoDB, JWT, Zod

- Architected a full-stack school management system with 36+ Mongoose models, secure REST APIs (JWT auth, Zod validation), and polymorphic RBAC across 6 roles (Superadmin, Admin, Teacher, Accountant, Parent, Driver).
- Built a daily fee-collection ledger for feeding and bus fares, with Socket.io real-time tracking, discrepancy resolution, and an immutable audit-log system.
- Implemented attendance tracking and GPS-based teacher check-in/check-out, plus a BECE-compliant grading engine with GES-standardized curriculum across 13 academic levels.
- Built a parent portal for viewing ward results, attendance records, and fee history.
- Ensured Ghana Data Protection Act (Act 843) compliance with guardian-consent workflows and third-party API health monitoring.

Slay by Humu — Luxury E-Commerce Storefront
slaybyhumu.vercel.app · React, Node.js, MongoDB, Tailwind CSS, Paystack

- Built a luxury storefront with an AI shopping assistant for product guidance, Paystack payments, real-time order tracking, and in-app notifications.
- Developed a full admin panel covering product/inventory management, order management, customer management, and sales analytics.
